

Make parent partnership easy

Securly Home is a family engagement add-on for Securly Filter, part of the Securly safetyOS™ for K-12. It extends the same trusted safety platform used by over 26,000 schools into the home, giving parents visibility and control over their child's school-issued device wherever learning happens. By empowering parents with real-time insights into their child's digital activity (including AI usage) Securly Home strengthens the school-family partnership and helps ensure every student stays safe, secure, and ready to learn.

Features

Admins customize the level of control for...

- **Parent visibility**
You choose what activity parents can see on their child's school-owned device. You can restrict it to only after-school activity, educational activity, or all activity, parents can check the live feed anytime with the app or web portal.
- **Filtering rules**
Depending on the level of control you set, parents can customize their own filtering rules when their child's school device is at home.
- **AI transparency settings**
Admins determine whether parents can view their child's AI activity through the Parent AI View, ensuring district AI policies extend seamlessly into the home environment.

Give parents the ability to...

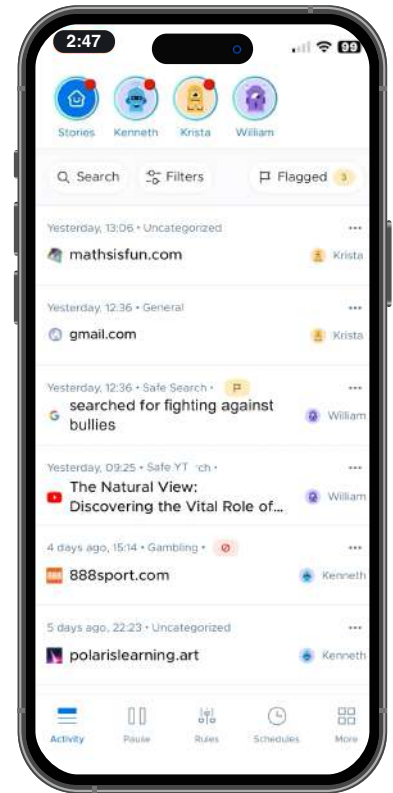

- **Check online activity** Parents can view their child's recent searches, sites visited, and videos watched on their school-owned device — all from a real-time activity feed in the app or web portal.
- **View AI usage with Parent AI View** As part of Securly's AI Transparency Solution, Parent AI View gives parents visibility into how their child is interacting with AI tools like ChatGPT, Google Gemini, and other AI tools on their school device. Parent AI View helps families stay informed and have meaningful conversations about responsible AI use.
- **Schedule offline times** Parents can set schedules for when the internet is off-limits — perfect for bedtime, homework hours, or family time.
- **Customize rules** Their house, their rules. Parents can customize filtering rules when school devices come home, within the boundaries set by the district.
- **Pause internet access** Parents can turn internet access on or off with a single tap when the device is away from school.
- **Opt in for notifications** Parents can opt in to receive flagged activity notifications for their child, including signs of bullying, self-harm, and violence, powered by Securly Aware integration.
- **Get weekly email reports** Every week, parents receive a snapshot of their child's online activity, directly to their inbox.

Multi-language support

Securly Home is fluent in multiple languages, including English, Spanish, and French. The app defaults to the language settings of a parent's personal device.

Student data privacy focused

All Securly products are built on enterprise-level data security and privacy practices. Securly meets strict FERPA and COPPA compliance requirements and is SOC 2 certified.

Part of the Securly safetyOS™

Securly Home connects seamlessly with the broader Securly ecosystem. When paired with Securly Filter, Aware, and the AI Transparency Solution, it gives districts a unified approach to student safety that extends beyond campus, keeping students protected everywhere learning happens.

filter

Cloud web filtering that powers Home's activity feed and filtering controls.

aware

Monitors student activity for safety risks and sends flagged notifications to parents through Home.

ai transparency

Provides the foundation for Parent AI View, giving families insight into student AI usage.

Make parent partnership easy

With seamless setup, admin-controlled flexibility, and real-time visibility into student activity (including AI usage) Securly Home strengthens the school-family connection without adding work for your team. Keep students safe on their school devices whether they're in the classroom, at home, or anywhere in between.
